Why BCL..?

Panel systems that reduce installation time & cost, whilst providing more design and performance options. We help to lower commercial risk, ensure compliance and maximise efficiency from concept to delivery.

**More Design
Flexibility.**

**More On-site
Efficiency.**

Panels. Enhanced.

Secret Fixings

Increased durability and better weathering - precision-engineered panels that look better and last longer, removing the risks of stains and moisture ingress from traditional fixings.

Integrated MEP

Reducing complex design coordination and increasing on-site efficiency & accuracy - panel systems with all services and details prefabricated in a controlled factory environment.

Design Flexible

Panels made to measure, support grids adapted to each scenario and enhanced prefabrication options - projects look better and are delivered faster.

End-to-End

Providing total package responsibility, including final installation on larger projects - we reduce commercial risk, whilst ensuring on-time completion and accurate delivery.

Solid Wood

Deliver beautiful organic walls & ceilings, sustainably sourced from the UK, EU and other global supply chains. BCL will consult on species selection and ensure correct specification.

- 30+ species
- FSC, PEFC or GiB certified
- Low / Negative Carbon
- Class B fire performance
- Organic aesthetics / natural variation

Aluminium

Create realistic wood tones with exceptional fire performance and durability with our unique range of 'TIMBER EFFECT' finishes - with thousands of colours and grains for your next project.

- Class A1 or A2 fire performance
- 3000+ colours inc. 'matching'
- 30+ year colour durability
- 68% Recycled Content
- 16% Pre / 52% Post Consumer

Performance. Unrivalled.

Fire

Achieve all of your EN13501-1 fire performance requirements in one system - up to Class B with solid wood or 'non combustible' A1 or A2 classifications with aluminium. Full systems tested directly by BCL, never 3rd parties.

Acoustic

ISO 11654 tested with almost limitless options - control ambient sound and shape acoustics to fit your scenario, with our Class A 'alpha panels' or any bespoke configuration to perfectly fit your space.

Bomb-blast

SIDOS & ASIAD pre-assessed for high security or UK Airport projects, our panel systems can come with additional 'bomb-grids', safety tethering and system specific blast modelling for specialised projects.

BIM Design

Maximising design efficiency and reducing commercial risk associated with interfacing details or 'clashes', our full BIM model coordination ensures complete development and integration with all MEP, interfacing details and structural grid.

UKAS Testing

Ensuring total compliance with all regulatory requirements, our UKAS testing reduces commercial risk for all stakeholders on large scale public & commercial projects.

Carbon. Negative.

-10kg CO₂/sqm

Directly reducing your carbon footprint - our wood panels are typically negative carbon TOTAL (A1-A3) GWP - due to low energy processes and the high organic content and the stored biogenic carbon in every BCL panel system.

Unique to You

Get accurate and realistic ISO accredited carbon calculations specific to your project, not just standalone EPDs that do not consider your design. BCL provide you with unmatched levels of transparency and accuracy.

BREEAM +

Our exceptional environmental profile and multiple certifications mean you can rest assured you will maximise environmental credits and the added value of sustainable materials with BCL panels.

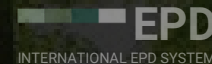

Certified

We hold chain of custody certification for FSC, PEFC & GiB domestic species and have undergone rigorous assessment to provide fully certified systems that ensure full compliance.

EPDs

ISO accredited and verified, we have undergone full LCA carbon assessment as a company, with published EPDs assessment of all related manufacturing processes and inputs, ensuring
